

What will my recovery be like?

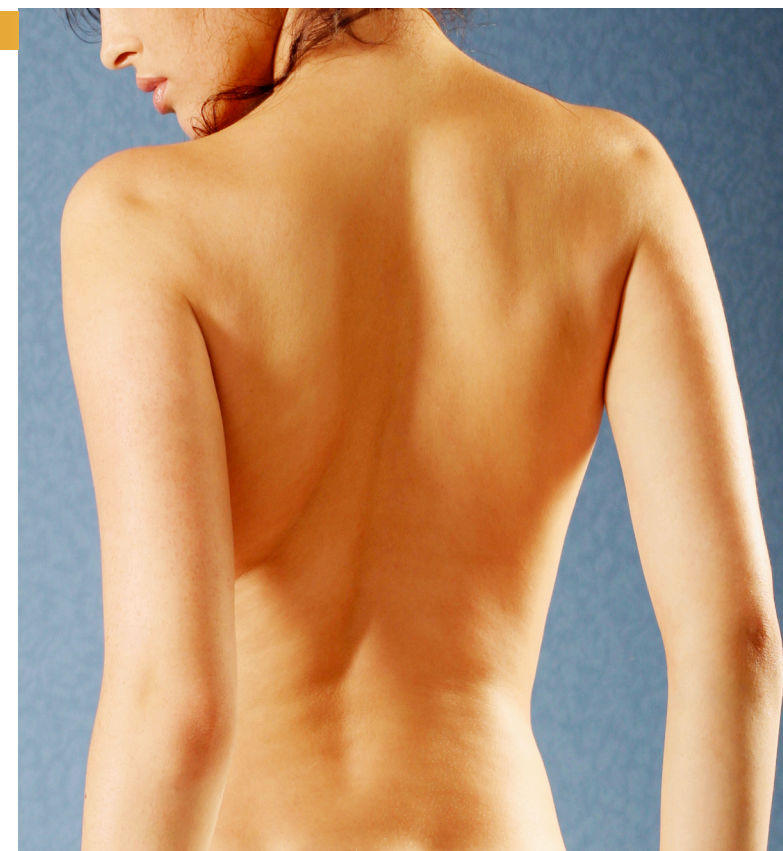

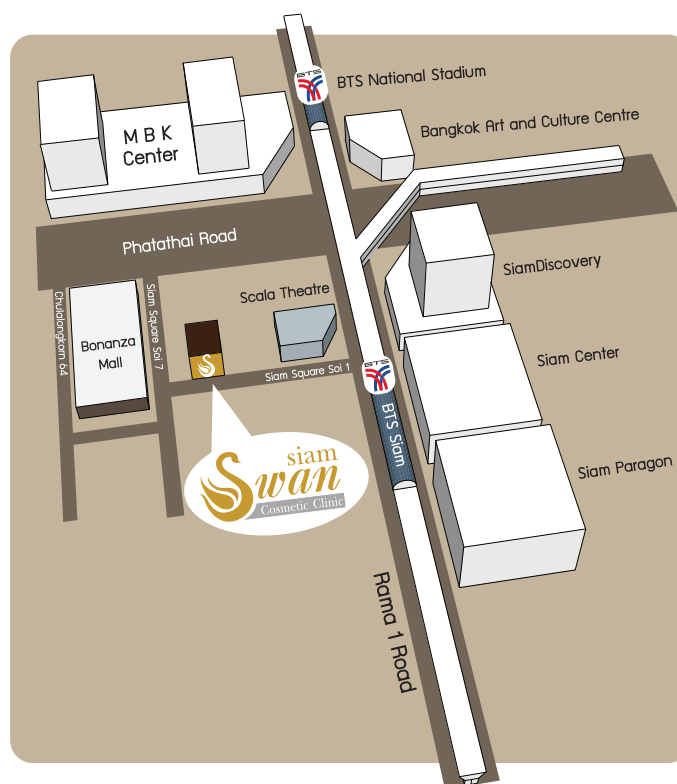

Patients who receive Laserlipo Plus are back to work in only a few days. You will go home after the procedure and rest for a few hours after which you may gradually increase your activity as tolerated. A pressure garment may be placed over the procedure area for several days to several weeks depending on the body area treated. Refrain from strenuous exercise for several weeks.

Is the fat removed permanent?

The fat removal is permanent. Should you gain weight, the fat will return to the areas not treated with the laser. For best results, maintain a healthy diet and exercise program.

SMART LIPO (LASERLIPO PLUS)

*For Quicker,
More efficient results.*

Everyone knows that no matter how much you diet and exercise; there are always stubborn, localized pockets of fat that will not go away. Your reason for choosing liposuction may be as simple as just wanting to look better in your clothes. While liposuction is not a replacement for a healthy lifestyle, it can make you look and feel better.

To reduce the localized unwanted deposited excess fat and to reshape the body, liposuction is still a gold standard procedure in this field.

Today, a variety of liposuction machines launch out in the market and they are sometimes confused the people. However, almost all of them have used the basic liposuction principle.

Laserlipo or Smartlipo is a laser lipolysis machine using the Nd-YAG laser system to melt the fat to oily substance by rupturing the fat cell membrane. The melted fat will be easily removed by liposuction machine then the tissue is less traumatic and quicker recovery time. Additional, Smartlipo can produce some skin tightening from this laser wavelength.

VaserLipo is an ultrasound lipolysis machine using ultrasound shock waves to lyse the fat. As Smartlipo, liposuction is still required to remove the melted fat out.

Radio frequency assisted liposuction (RFAL) is another liposuction system using bipolar radiofrequency to melt the fat. Like other systems, melted fat is also removed out by liposuction procedure.

Power assisted liposuction (PAL) consists of using a liposuction cannula that oscillates or vibrates to help break up fatty tissue as it is being removed from the body. It allows for a slightly more gentle technique than traditional liposuction to be used and is especially helpful in areas of dense adipose tissue.

To achieve the best result of liposuction, it really does not matter what technology is being used nearly as much as the expertise of the plastic surgeon that is performing the procedure. Available systems only help a bit to ease the fat cell melting, the outcome is mainly on surgical skill, not machine.

What's about LaserLipo Plus?

LaserLipo plus is a combination of laserlipolysis machine like as Smartlipo to melt the fat and advanced liposuction system , Power Assisted Liposuction (PAL) to remove the melted fat out. By this combination, they can produce more smooth and dramatic result with less recovery time. More than 1,000 LaserLipo Plus procedures at Siam Swan Cosmetic Clinic had proved.
